Genetics

Driving Sustainability in Aquaculture

Benchmark Genetics is a global leader in aquaculture breeding and genetics. Our mission is to drive sustainability in aquaculture.

We do this by improving yield, quality, health, and animal welfare. Operating land-based production systems with high biosecurity standards, we deliver Atlantic salmon ova all year round.

Benchmark[®]
Genetics

Our product range

Our products are the result of long-term breeding programs based on our clients' challenges and opportunities.

Benchmark Genetics provide the best genetics available at the start of the production cycle to ensure robust, fast-growing and disease resistant salmon.

Our product range also include products adapted for organic production, all-female for reduced maturation and sterile fish using triploid technology. From our production in Iceland, we are also able to offer ova from ISA-free stock.
